easily reduce machine down time

- enhance player experience
- maximize serviceability
- drive profits

WHEN SLOT MACHINES REQUIRE SERVICING OR NEED TO BE UPGRADED, THEY ARE LEFT SITTING UNUSED ON THE CASINO FLOOR NOT GENERATING REVENUE. ICRON'S EXTREMEUSB® TECHNOLOGY CAN SIGNIFICANTLY REDUCE MACHINE DOWN TIME BY CREATING A CENTRALIZED SERVICE LOCATION.

To service slot machines, a technician must be dispatched to the casino floor next to the device. If machines are non operational and not serviced immediately, they cannot be used to generate revenue. If machines are serviced promptly, this results in disruption and distraction for nearby players.

With a remote service model, the machines are easily serviced or upgraded from a central location. No player interruption or distraction is necessary and the machines are quickly upgraded, maximizing uptime and revenues.

Icron Technologies' ExtremeUSB offers transparent connectivity to a centralized service computer at distances of up to 10 kilometers. This technology enhances the player's experience by minimizing disruptions and maximizing serviceability. Less time is spent by the technician servicing each machine, and players enjoy more time playing.

ExtremeUSB connects the slot machine's computer, keypad, touchscreen, card reader, printer or other controls to a centralized location. Information is quickly uploaded or downloaded transparent to the players resulting in no distraction or disruption.

Further, service costs are lower since a technician isn't spending his or her time going to each machine. The time it takes to deploy a machine decreases since the management is centralized, and revenue increases because machines are operational in a shorter period of time.

Time spent deploying the machines and servicing them is substantially reduced. By centralizing the service location and enabling connectivity to multiple machines at one time, costs of servicing, monitoring, and upgrading are greatly reduced.

Icron's ExtremeUSB makes it possible. We provide a variety of USB connectivity solutions to fit your specific design and business needs. Icron is focused on helping you enhance your customer's experience and can help you improve efficiency and maximize revenue.
